Mr. Seed Dealer-

This ad appearing in Market Growers Journal is a part of Corneli's national advertising to help you sell more KEYSTONE Seeds.

Order some of these fine strains of Keystone Carrot Seed now along with any other seed needed.

FOR CARROTS

be **SURE** with
KEYSTONE SEEDS

**OTHER FINE
KEYSTONE
STRAINS INCLUDE:**

CHANTENAY RED CORE—Best carrot for canning, soup making and freezing.

CHANTENAY LONG TYPE—Uses are similar to Chantenay Red Core.

DANVERS HALF LONG—Excellent for storage and bulk sale.

DANVERS RED CORE—Local market and short storage.

TOUCHON OR IMPROVED NANTES—A carrot of very highest quality for local market.

To grow good market carrots plow deep and plant KEYSTONE seeds with the vigor and vitality bred into them in the high mountain valleys where we do our carrot breeding and growing.

Two years are required to grow carrot seed. All roots selected for our stock seed production are cut open to be sure of internal color-uniformity and intensity. Roots produced from this fine stock seed are field sorted before storing and are carefully belt-sorted the following spring before planting.

IMPERATOR

Deep plowing and a deep mellow seed bed are necessary to produce the smooth long roots so popular on the present day market. On extremely deep mellow soil and where the very longest market roots are wanted, specify Keystone strain of Emperor Long Type. On fairly deep mellow soil plant our regular Emperor.
